

A Message from Editor-in-Chief

Dear statistics community:

I am delighted to make available to you the second issue of Volume 9, published in 2018 by the the Chilean Journal of Statistics, an official publication of the Chilean Statistical Society. Four papers are included in this issue. The first one describes the specification, estimation and comparison of simplex mixed models using the likelihood paradigm. The second paper presents an elitist non-homogeneous genetic algorithm where the mutation probability is adjusted by a fuzzy controller. The third article introduces compositional regression modeling under tilted normal errors. Finally, the last paper deals with the maximum of Shannon and Tsallis entropies by using quantile functions.

I would like to thank the authors who honor us by choosing our journal to publish their research. I would also like to thank all anonymous reviewers and associate editors who contributed to maintain the quality standards of our journal.

Best regards to all,
Ronny Vallejos
Editor-in-Chief
Chilean Journal of Statistic
